(54) DIGITAL SATELLITE BROADCASTING RECEIVER

(57)Abstract:

PROBLEM TO BE SOLVED: To easily provide the music piece information of sound added information, even when a user does not listen in real time, and to execute recording reservation per music pieces.

SOLUTION: A control part 30 stores the sound additional information separated by a multiple data separation circuit 6 in a memory along with a reservation management flag based on the discriminating processing result of whether or not it is a now music piece, generates display data for performing list display based on the stored music piece information, supplies them to an OSD circuit 9 and makes a music piece list be displayed on the screen of a TV 12. When music piece reservation is completed by a remote controller 11, the control part 30 compares specified music piece information which is stored on the memory 31 with the music piece information during reception. When they, match, it is considered as a designated music piece and the sound output of an MPEG sound reproducing circuit 7 is turned on. When they do not match, it is discriminated as being not a designated music piece, and the sound output is turned off. Thus, the music piece information required for performing tuning is obtained without listening to sound broadcasting in real time so that the music piece reservation can be made.
